

## ECOFLOW SUCCESS AT

# "30 Rock"- 30 Rockefeller Plaza

## Location

Manhattan, NY, NY

## Highlights

- 70 story building in the heart of Manhattan
- Home of NBC® Studios
- Concourse and ground level filled with dozens of coffee shops and restaurants

## Problem

In 2006 "30 Rock" had major grease buildup in a series of sewer ejector pits that received waste from the restaurants and coffee shops on the concourse level. This frequently caused alarms to malfunction and give off extremely offensive odors into public areas.

## Ecoflow Solution

In 2006 "30 Rock" installed one BIO-Amp™ system on the ground level at their most problematic ejector pit.

## Result

Since the installation of the BIO-Amp system, the building has not had any major issues with odors or alarm malfunctions on these levels, resulting in a more pleasurable experience for customers and dining patrons.

Additionally, the building has added 5 BIO-Amps to address other issues in the building.
