

ECOFLOW SUCCESS AT

University of New Mexico: Student Union Building

THE UNIVERSITY of
NEW MEXICO

Location

Albuquerque, NM

Highlights

- 36,000 students
- Student Union building home to 60 student organizations
- 8 different restaurant options

Problem

The University of New Mexico's Student Union building had a major issue with backups in 2007. Monthly backups had become the norm as the building served as the main hub for UNM students, costing the school nearly \$1,200 a month.

Ecoflow Solution

In early 2007 the school started work with Chemsearch FE in adding 2 BIO-Amps™ to the main Student Union building.

Result

The installation of the BIO-Amp drastically reduced backups and resulted in significant savings on drain maintenance costs each month. Additionally, 2 DrainCobras were added to the food service facility for preventative maintenance.
