

ECOFLOW SUCCESS AT

Marriott New York Downtown

Location

Manhattan, NY, NY

Highlights

- 490 guestrooms and 7 suites
- 16 meeting rooms - 12,000 sq ft. total meeting space
- Centrally located in Lower Manhattan, New York's Financial District

Problem

The Marriott was unhappy with the service of a liquid biological that promised to reduce odors and grease accumulation in the grease trap. The biggest problem was the primary dish washing line that continually backed up and caused odor problems.

Ecoflow Solution

The Marriott Downtown installed a BIO-Amp™ system to treat the main dish washing drain line.

Result

Since the installation of the BIO-Amp system, the building has not had any major issues with odors or backups, resulting in a more pleasurable experience for customers and dining patrons.

Additionally, the building has added 2 more BIO-Amps to address other drain lines in the kitchen and restaurant. The grease trap is now cleaned once or twice a year.
